

# REDOMIUM

## Overview:

Innovative solution for an Alms box and automatic lighting of altars and altarpieces. We often see people praying to a saint on an altar where there is no box/receptacle to place their offerings, and generally a shady altar. REDOMIUM is the intelligent solution to solve this problem, while representing a source of income for the Parish at the same time.

It receives the offers (coins) and lights up a number of candles that can be programmed thanks to the internal microprocessor that manages and allows setting the duration time of the lighting candles and the price on each candle. At the same time it turns on a LED projector during the time of candle lighting. With 24 LED candles/lights protected by a delicate glass-based bowl, this votive stand occupies little space, is easily transportable and has a very low power consumption of 1W at rest and 3W when fully lit.

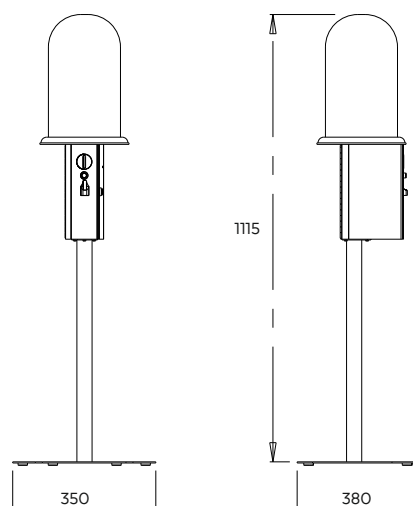

If the altar already has lighting, the socket on this appliance can be used to switch it on. The lighting of the candles and the consequent illumination of the altar will naturally lead to a connection between the praying one, the Saint represented by the image and the surrounding space of the altar.

## Specifications:

- ◆ Electronic Lamp stand
- ◆ 24 LED technology candles
- ◆ Internal microprocessor to manage functions
- ◆ Duration time and price of each candle-lighting
- ◆ Coin acceptor for 6 coins (prepared for different currencies)
- ◆ Way-out for rejected coins
- ◆ Delicate glass bowl
- ◆ Steel safe with locking key
- ◆ 85-264V AC mains voltage
- ◆ Metal construction
- ◆ Supplied with a 10W LED light- IP65
